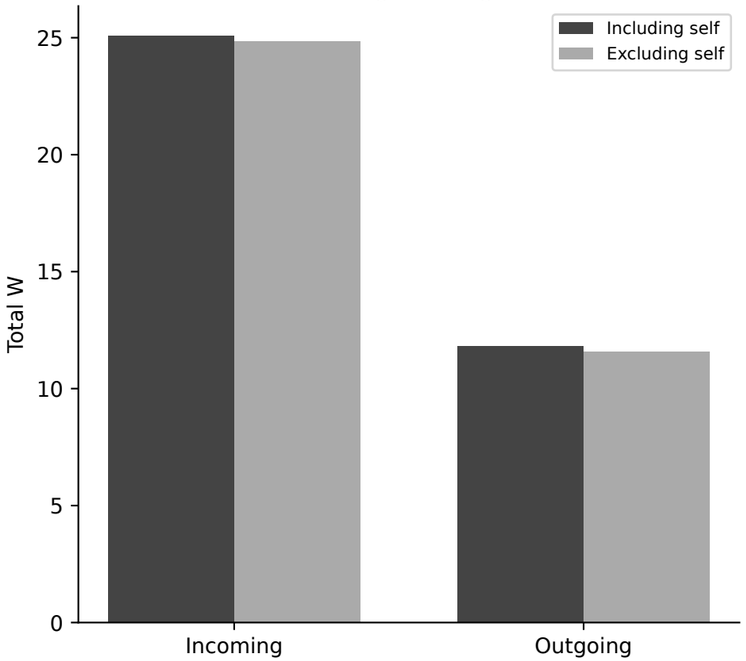
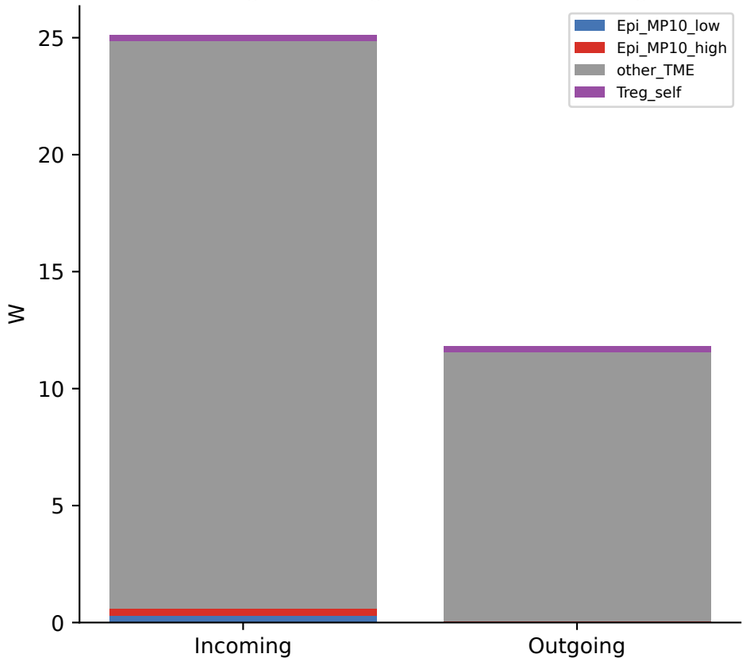
InhouseData: Treg in the complete fine network — global totals are not state-specific

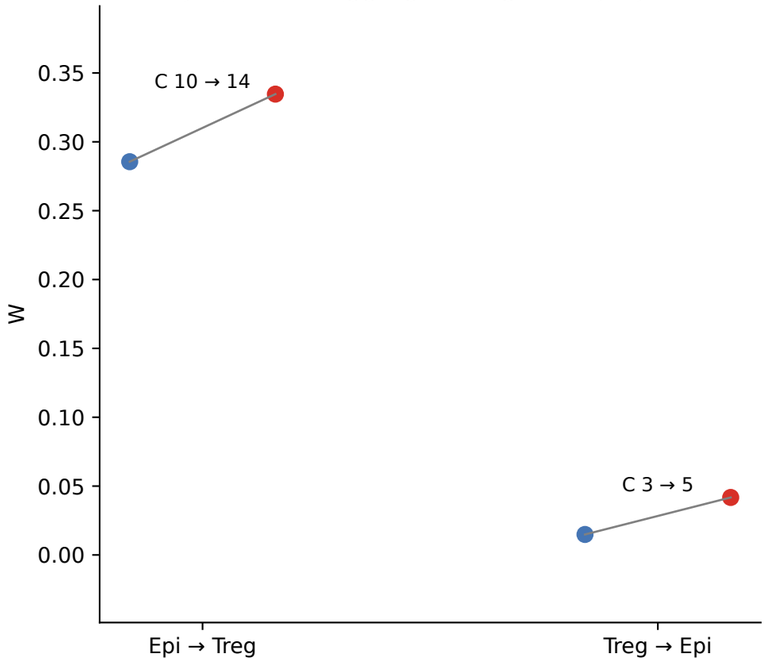
One shared Treg node: global totals



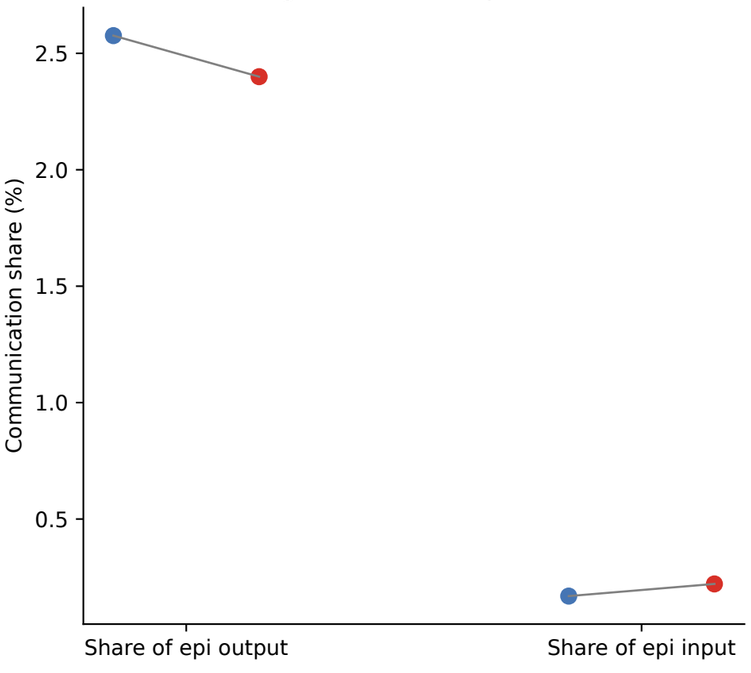
Where global Treg totals come from / go



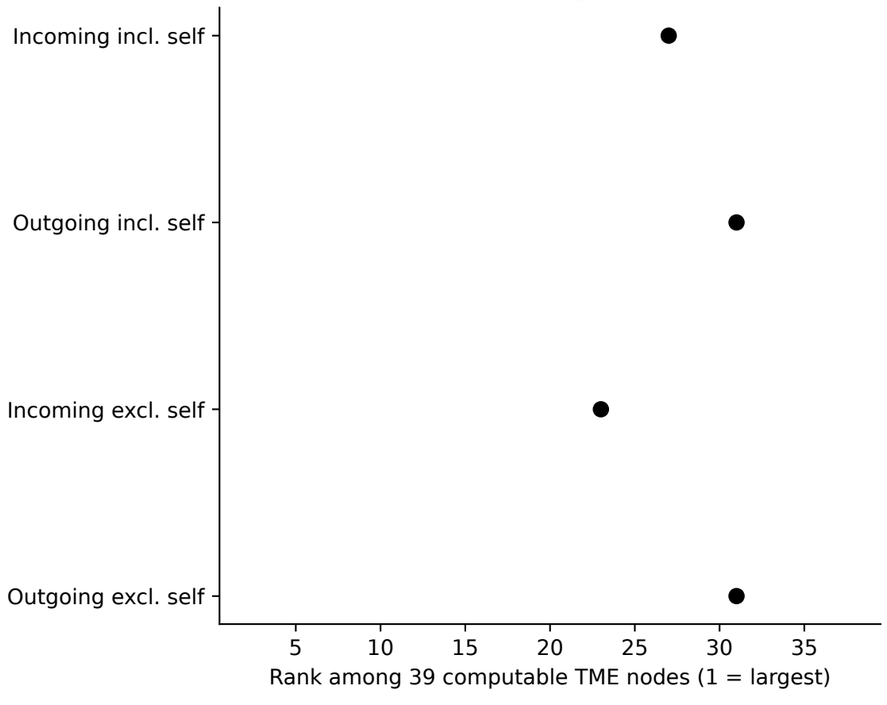
Only epithelial aggregate edges vary by state



Fraction among the same computable TME nodes



Global Treg rank



Coverage (recorded IDs are unverified)
Epi_MP10_low
  cells raw / sampled: 9002 / 1200
  specimens / recorded IDs: 12 / 11
Epi_MP10_high
  cells raw / sampled: 8996 / 1200
  specimens / recorded IDs: 12 / 11
Treg
  cells raw / sampled: 4912 / 1196
  specimens / recorded IDs: 12 / 11
Matched epi-low + epi-high + Treg ≥30:
  12 specimens / 11 IDs
Blue = epi low; red = epi high
